4. You can view the Abstract and Classification Matches:

Abstract:	This article presents a micromobility policy comparison between ten mid-size peer cities with respect to twelve policy dimensions. The policy, a temporal analysis of policy dimensions is required, which we conduct and present in this work. The impact of city, itself, the operating company, and the mobility user – all of which are assessed throughout this work. Many of these policies are shared between cities, such as fleet caps, permitting fees, and equity requirements. In the temporal analysis, we find that there is significant variability in attempts to manage forms of micromobility, but appreciable trends. Approximately one year after the introduction of scooters in cities throughout the United States and the world, cities have made multiple attempts at regulations and legislation. Throughout this time, cities have converged in some aspects of policy such as device removal, safety, insurance, and bonding requirements but also directed movement over time, such as fleet expansion plans, permissible operating areas, and parking regulations.
Classifications:	Administration and Management ; Emerging and Innovative Public Transport and Tech Innovation and Strategy ABC10 ; Micromobility ; Mobility as a Service ; Mobility on Demand ; Transportation Issues in Major Cities and Urban Mobility ABE30 ; Urban Mobility
